

NOTABLE COMPUTING BOOKS AND ARTICLES—2012

When we began this project, our goal was to compile a definitive list of the best items published in computing in 2012. As it turns out, this was a difficult task. Despite considerable effort, we don't think we've developed that definitive "best" list just yet. However, what we do have is a list of notable computing items published in 2012.

We received nominations from our reviewers, *CR* category editors, the editors in chief of journals we cover, and others in the computing community. We received a total of 121 nominations, but excluded 30 items mainly due to self-nomination or non-2012 publication dates. Therefore, you will find 91 items on our list, with numerous publishers represented.

As we continue to improve our methods for collecting nominations and involve more of your peers in the computing community, we hope to bring you an even more definitive list next year!

We welcome your feedback, and encourage you to email us with any questions (editorial@computingreviews.com).

Angela Condon
